Dust-Free Blasting

High-performance blasting technology
for all surface treatment applications

Special engineered equipment with integrated abrasive recycling:

- optimum surface results with all kinds of abrasive
- pressure-fed or suction-fed blasting
- shotblasting anywhere with no pollution of the environment
- automated systems for special components and mass-produced parts
- production-proven throughout the manufacturing industry
- for more solutions regarding surface treatment equipment visit us at www.munk-schmitz.de

The other side of the coin...

In this short column MFN gives a glimpse into the hobbies and other activities of our trainers. To find out more about their professional backgrounds, see www.mfn.li, link "Shot Peening Workshops".

Official MFN Trainer: Guy Levasseur

Being in international business is very demanding and requires that Guy spends a lot of time away from home. So when he DOES get home, he likes to spend quality time with his family and like shot peening, apply some stress relief techniques. This is why Guy's hobby is playing the drums. His preferred music type is progressive rock, jazz, blues, and a bit of harder rock to warm him up. There's nothing like a good sweat to forget about life's little miseries and business challenges. Contact: guy@mfn.li

DryStrip® Plastic Blast Media

DryStrip® is used whenever there is a need to meet high standards. The sharp edged particles remove paint, contamination and other coatings, while maintaining substrate integrity. Thus even very delicate surfaces such as aluminium, magnesium, composite material etc. will not suffer any material erosion or other damages. Ask for different sizes.
